

Small Pot Improvements

Schmidt has raised the bar again! Small Blast Pots are now better than ever!

A product of Axxiom Manufacturing, Inc.

The industry's most productive blasting systems are better than ever. Already boasting the industry's lowest pressure drop, Schmidt® blast pots keep improving with both quality of life upgrades and substantial feature improvements.

Schmidt blasting systems represent the greatest value for both contractors and industrial users, especially when working with expensive medias where productivity and efficiency are necessary to maximize profit. Our systems are designed to maximize pressure from the air compressor all the way to the blast hose, compared to as much as a 10-15 psi loss in competitors' units.

New Features:

- NEW MicroValve® 3 (MV3™) with dramatically improved wear resistance
- NEW VBS II™ (Volumetric Blowdown Suppression) system, designed to dramatically reduce noise and protect the job site from fast moving particles
- NEW SureFit™ snap-on handway gasket allows for an even fit, greatly reducing the risk for air leaks
- Improved pop-up and new skirted pop-up gasket improve vessel seal, extending the life of the pot
- NEW hinged lid for easier and more convenient access to the vessel and weather protection (optional)
- NEW universal load skid on all pot sizes for ease of transport (optional)
